

Glass bottle manufacturing - the path to optimal sustainability through automation and digitalization

Sudha Jebadurai, President
Agr International, Inc.

AIGMF | March 2025

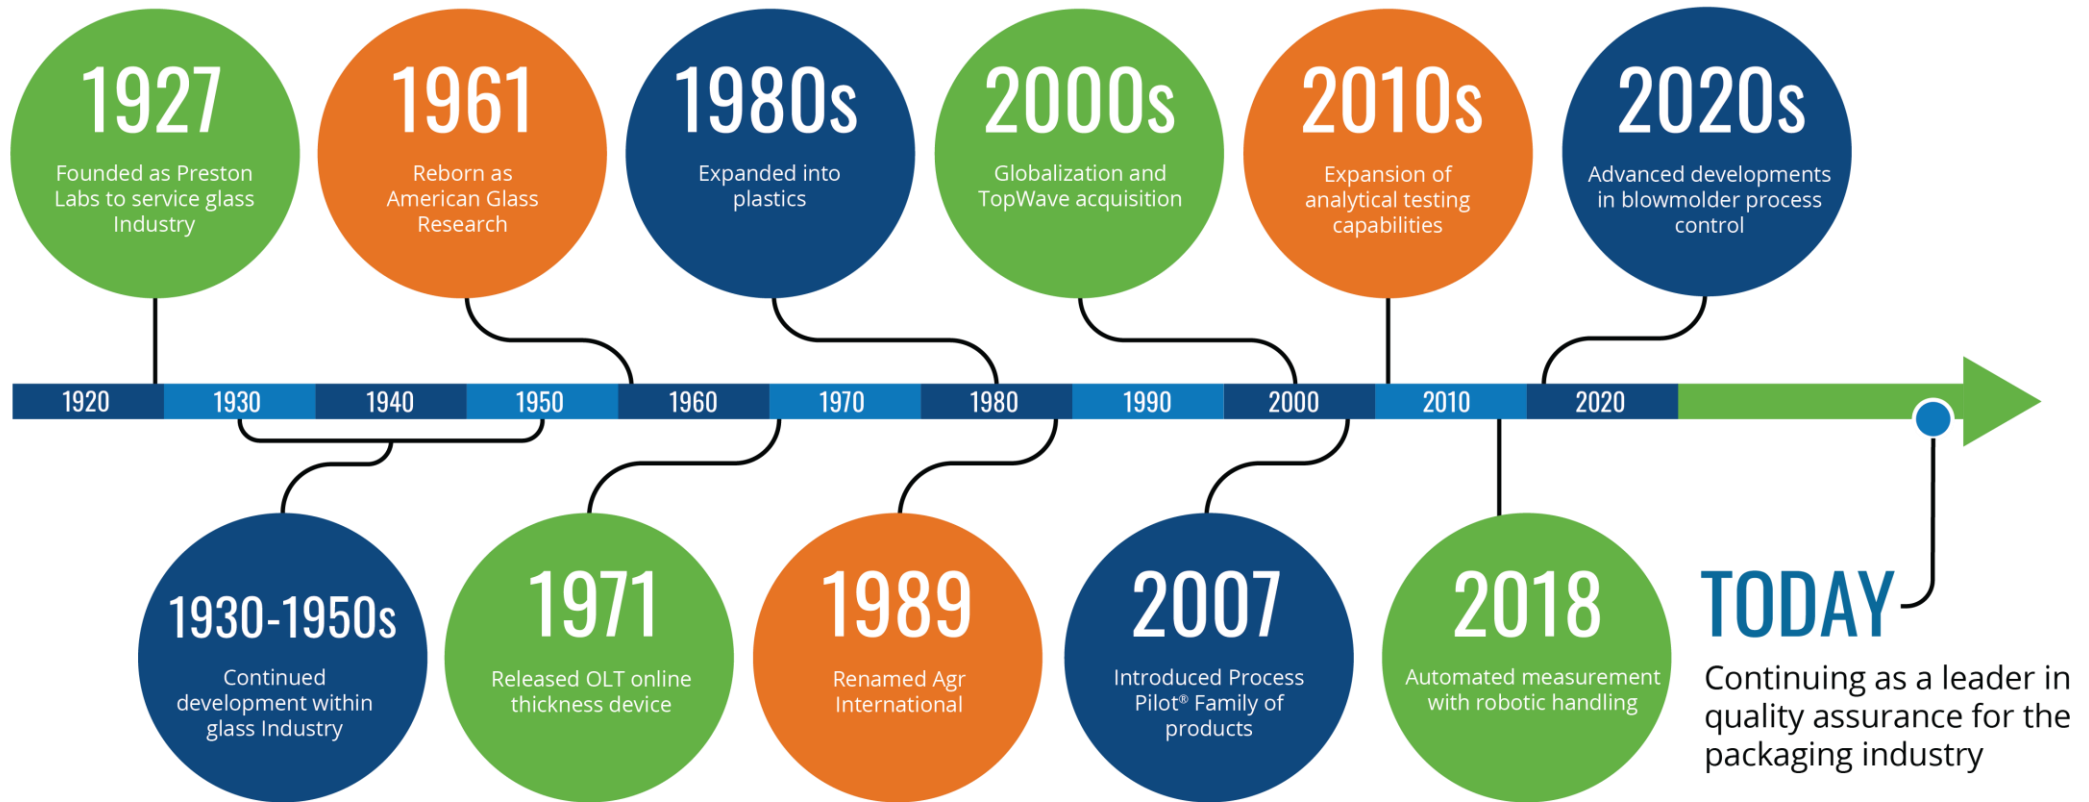

International Women's Day – March 8, 2025

More women are in manufacturing, design, business leadership & sales:

- Entrepreneurship & Corporate Leadership
- Technology & Automation
- Sustainability & Innovation
- Design & Architecture
- Networking & Mentorship

Sustainability - What?

The ability to meet current needs by maintaining or supporting a process continuously over time...

...without compromising the ability of future generations to meet their needs.

Agr[®]

Sustainability - Why?

To balance economic growth, healthy communities and environmental protection

Sustainability – How?

- **Economical**
 - Growth without negative impact
 - Green business practices and technologies
- **Environmental**
 - Conserve natural resources
 - Reduce pollution and waste
- **Societal**
 - Promote well-being, equity and access to resources
 - Community involvement and education

How can these goals be accomplished in glass container manufacturing?

- **Product Sustainability - Responsible Packaging**
 - Lightweighting
 - Recycled material
- **Process Sustainability - Automation & Digitalization**
 - Digitize
 - Monitor
 - Manage
 - Control

Product Sustainability - Lightweighting

The targeted reduction in the glass thickness of a container without compromising the strength and functionality of the container.

- Less glass means:
 - Fewer raw materials used
 - Lower transportation costs
 - Less energy consumed & lower CO₂ emissions
 - Financial benefits
 - Reduced wear on plant equipment
 - Lower land fills

Product Sustainability - Lightweighting

Product Sustainability - Lightweighting

Financial savings example

1000ml Liquor Bottle

Standard Weight	
Glass Weight	700 grams
Machine Speed	6 cycle (180 bpm)
Tons /day (US)	200
Packing Efficiency	90%
Bottles Packed /day	233,280
Selling Price	\$0.07 /bottle
Annual Revenue	\$5.96 M

Lightweight Bottle	
Glass Weight	490 grams
Machine Speed	8 cycle (240 bpm)
Tons /day (US)	186
Packing Efficiency	90%
Bottles Packed /day	311,040
Selling Price	\$0.07 /bottle
Annual Revenue	\$7.965 M

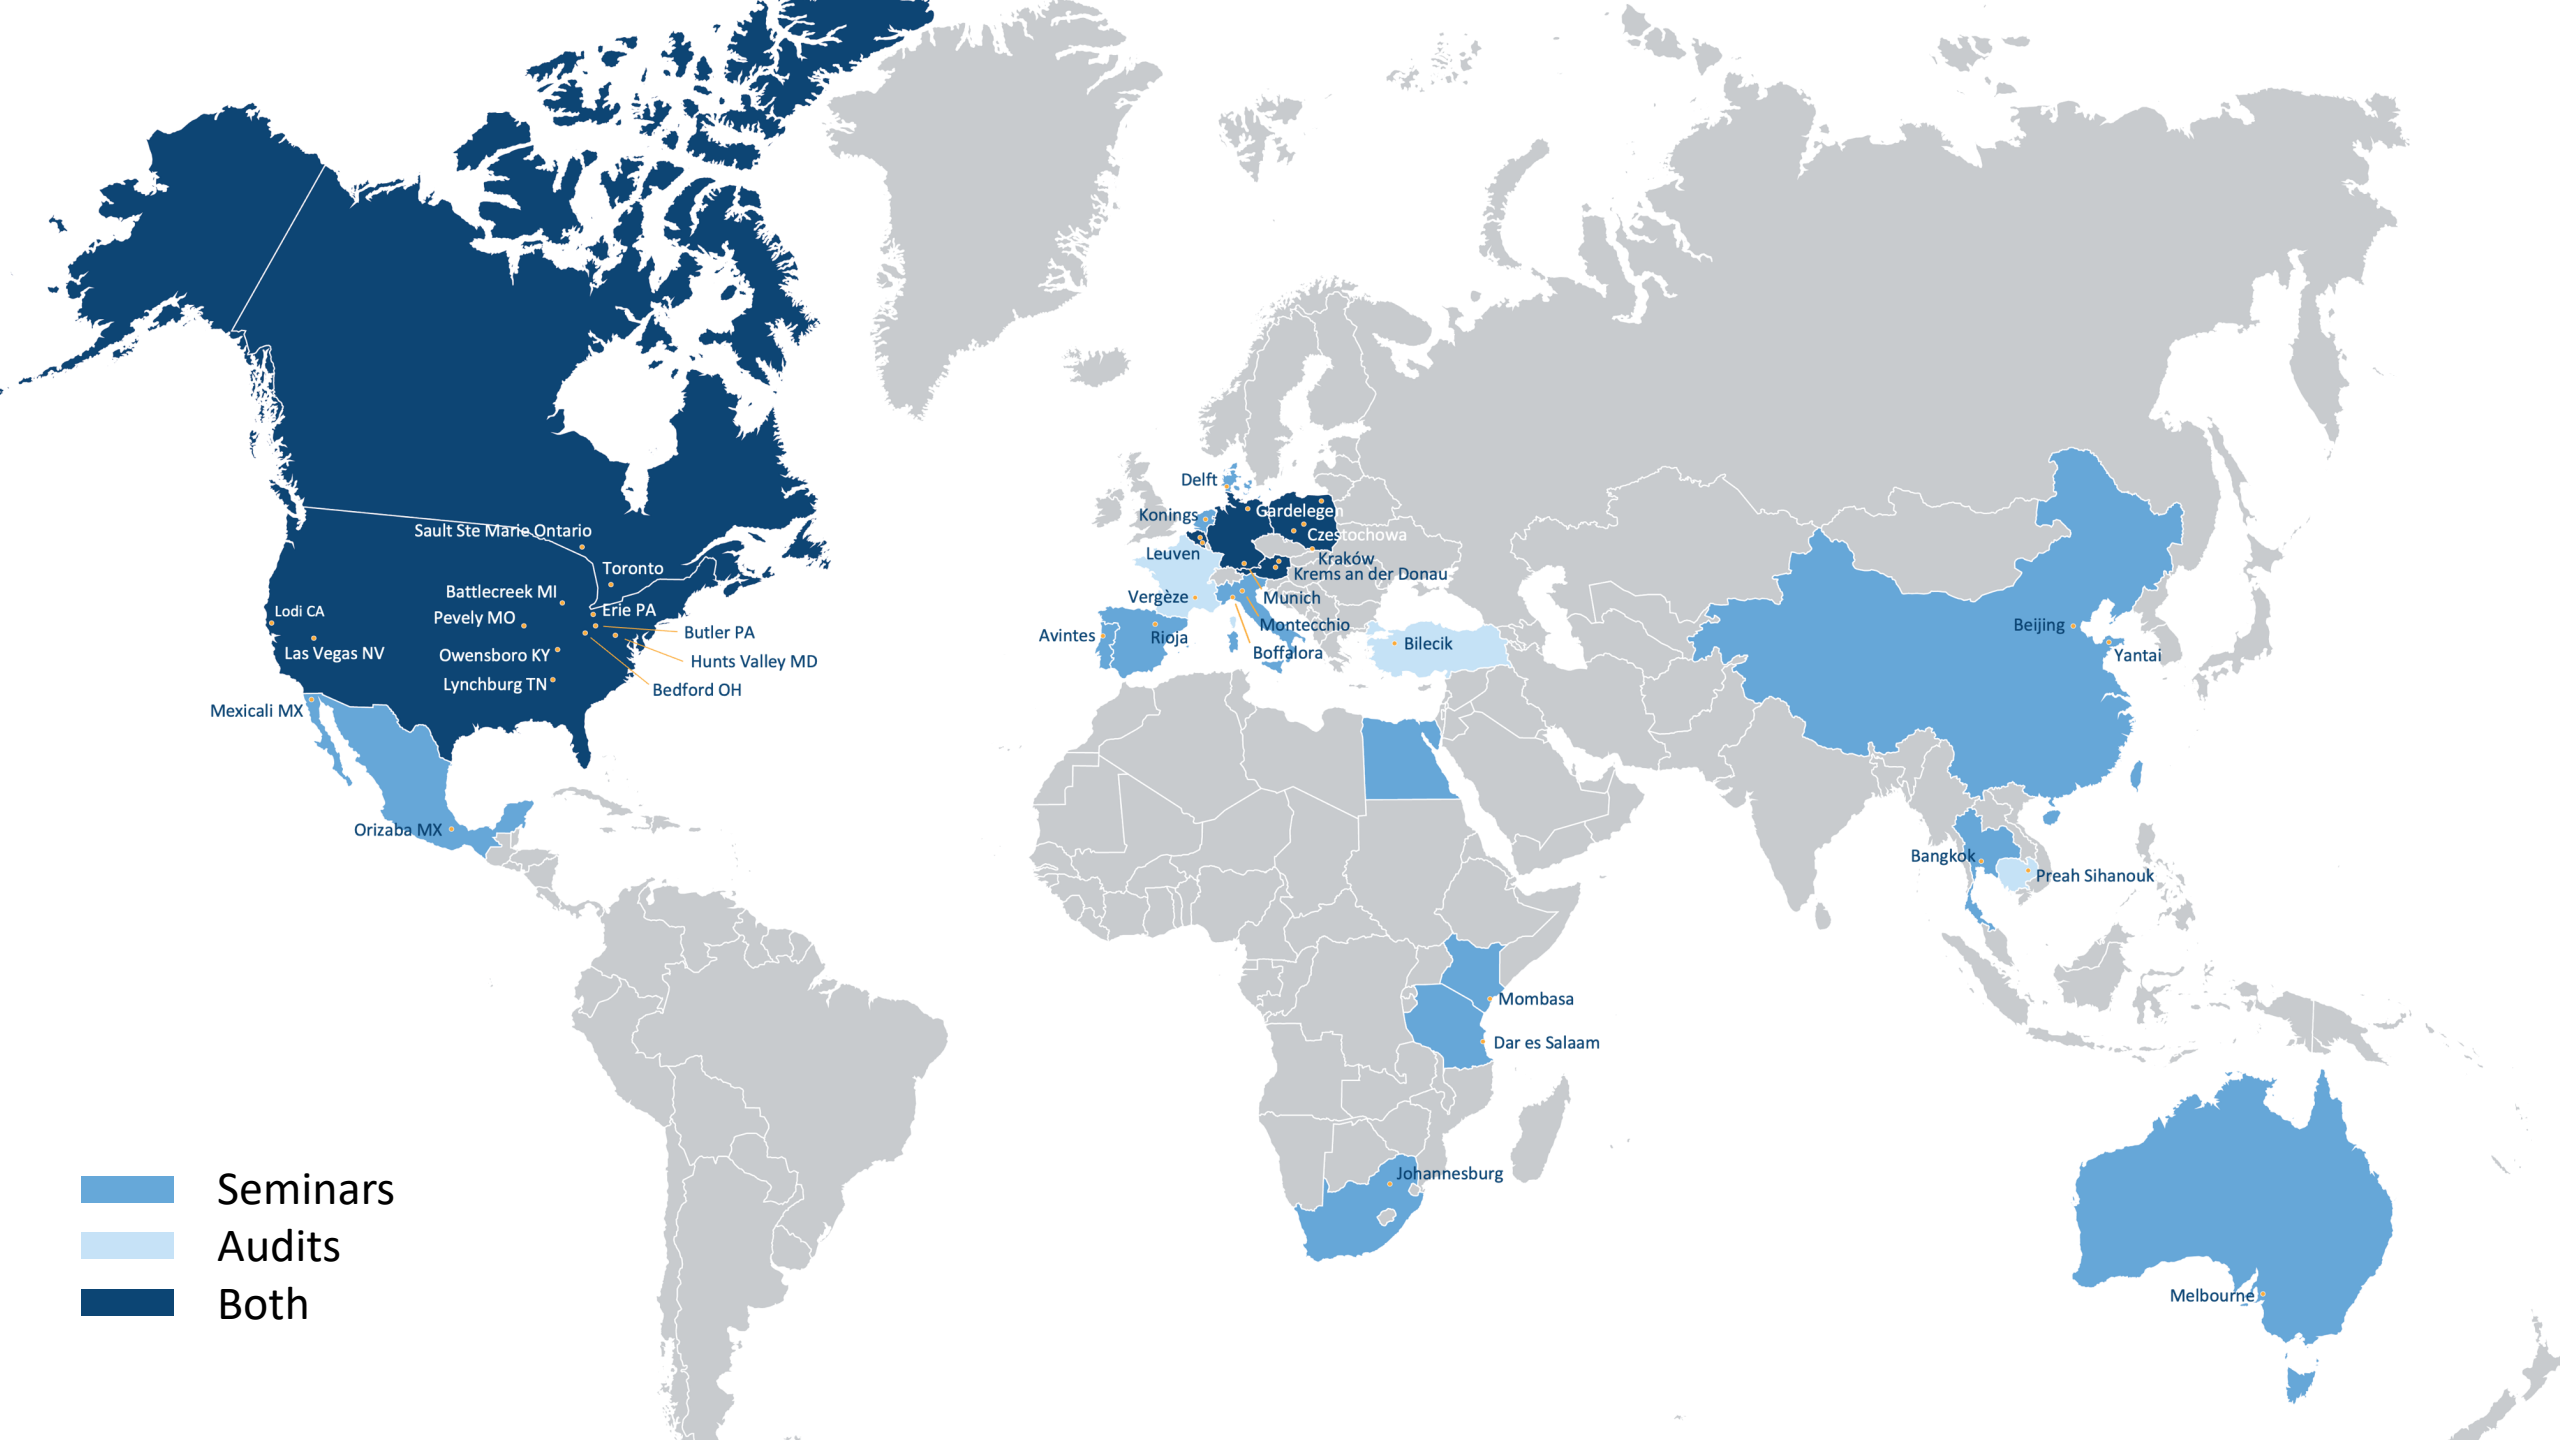

Cost Benefit = 33%

Product Sustainability - Lightweighting

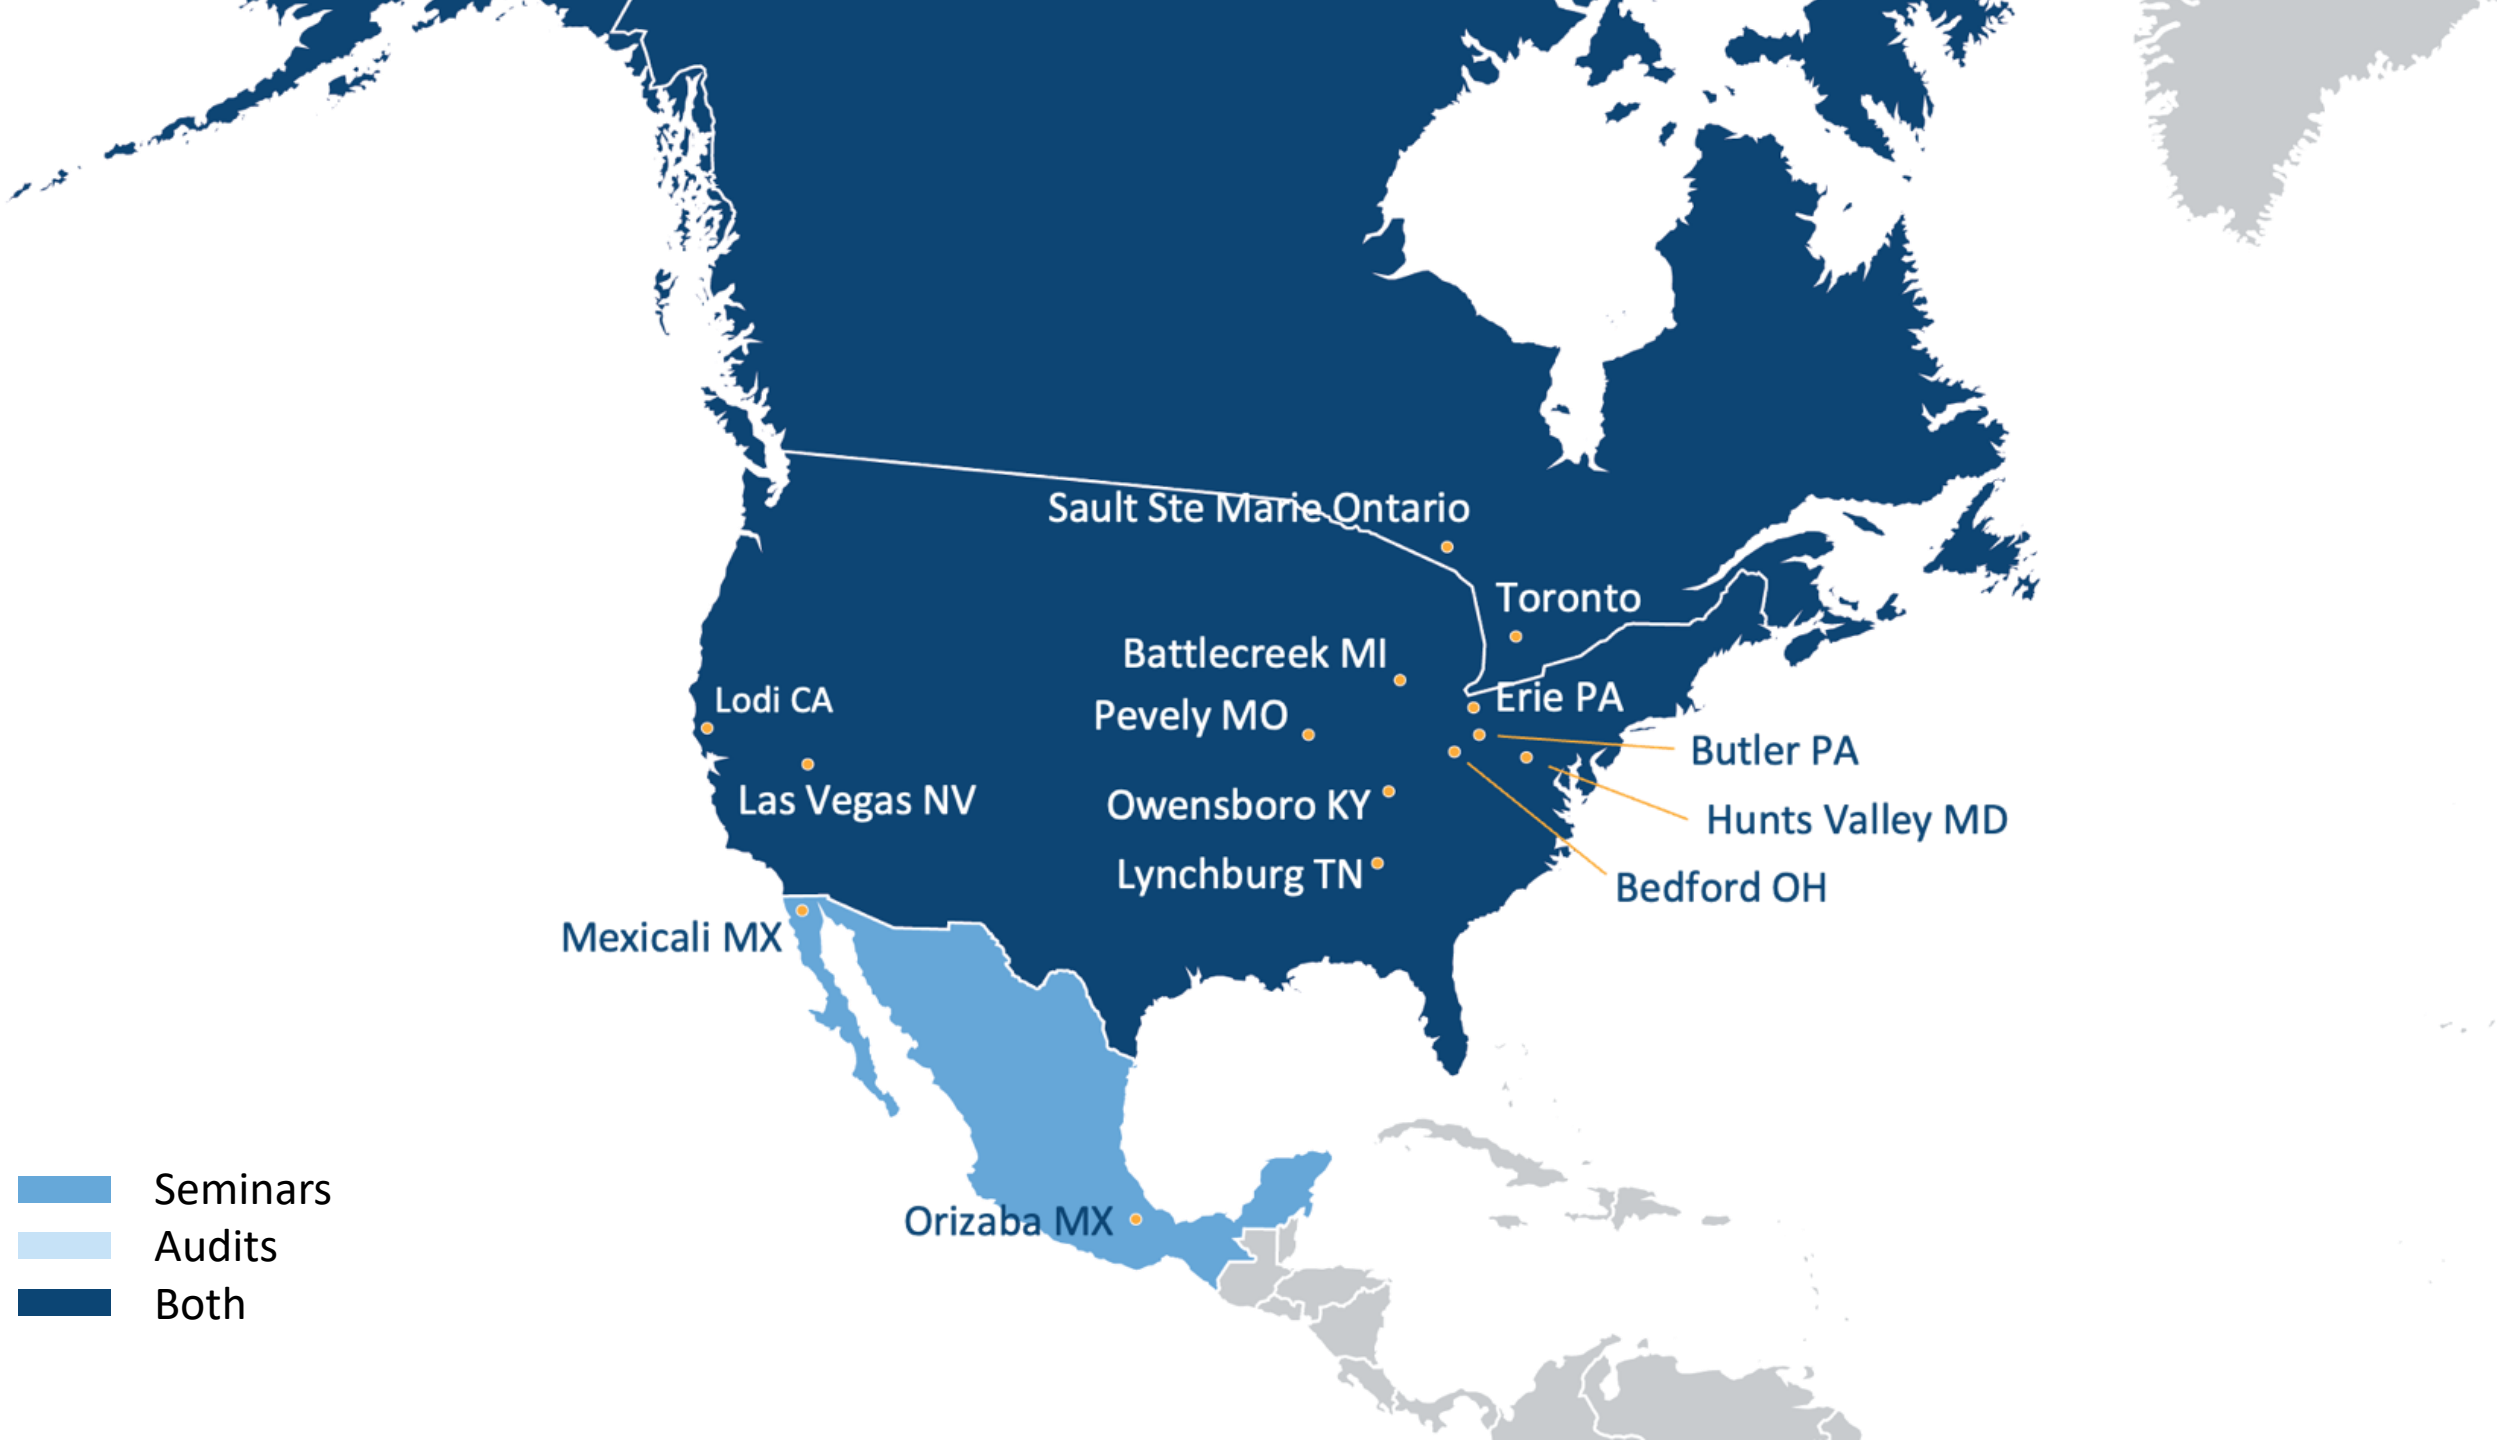

Agr offers a complete solution for your lightweighting process

- Bottle design with FEA Analysis
- Line audits
- Proof of Design testing
- Production process verification requirements
- Training

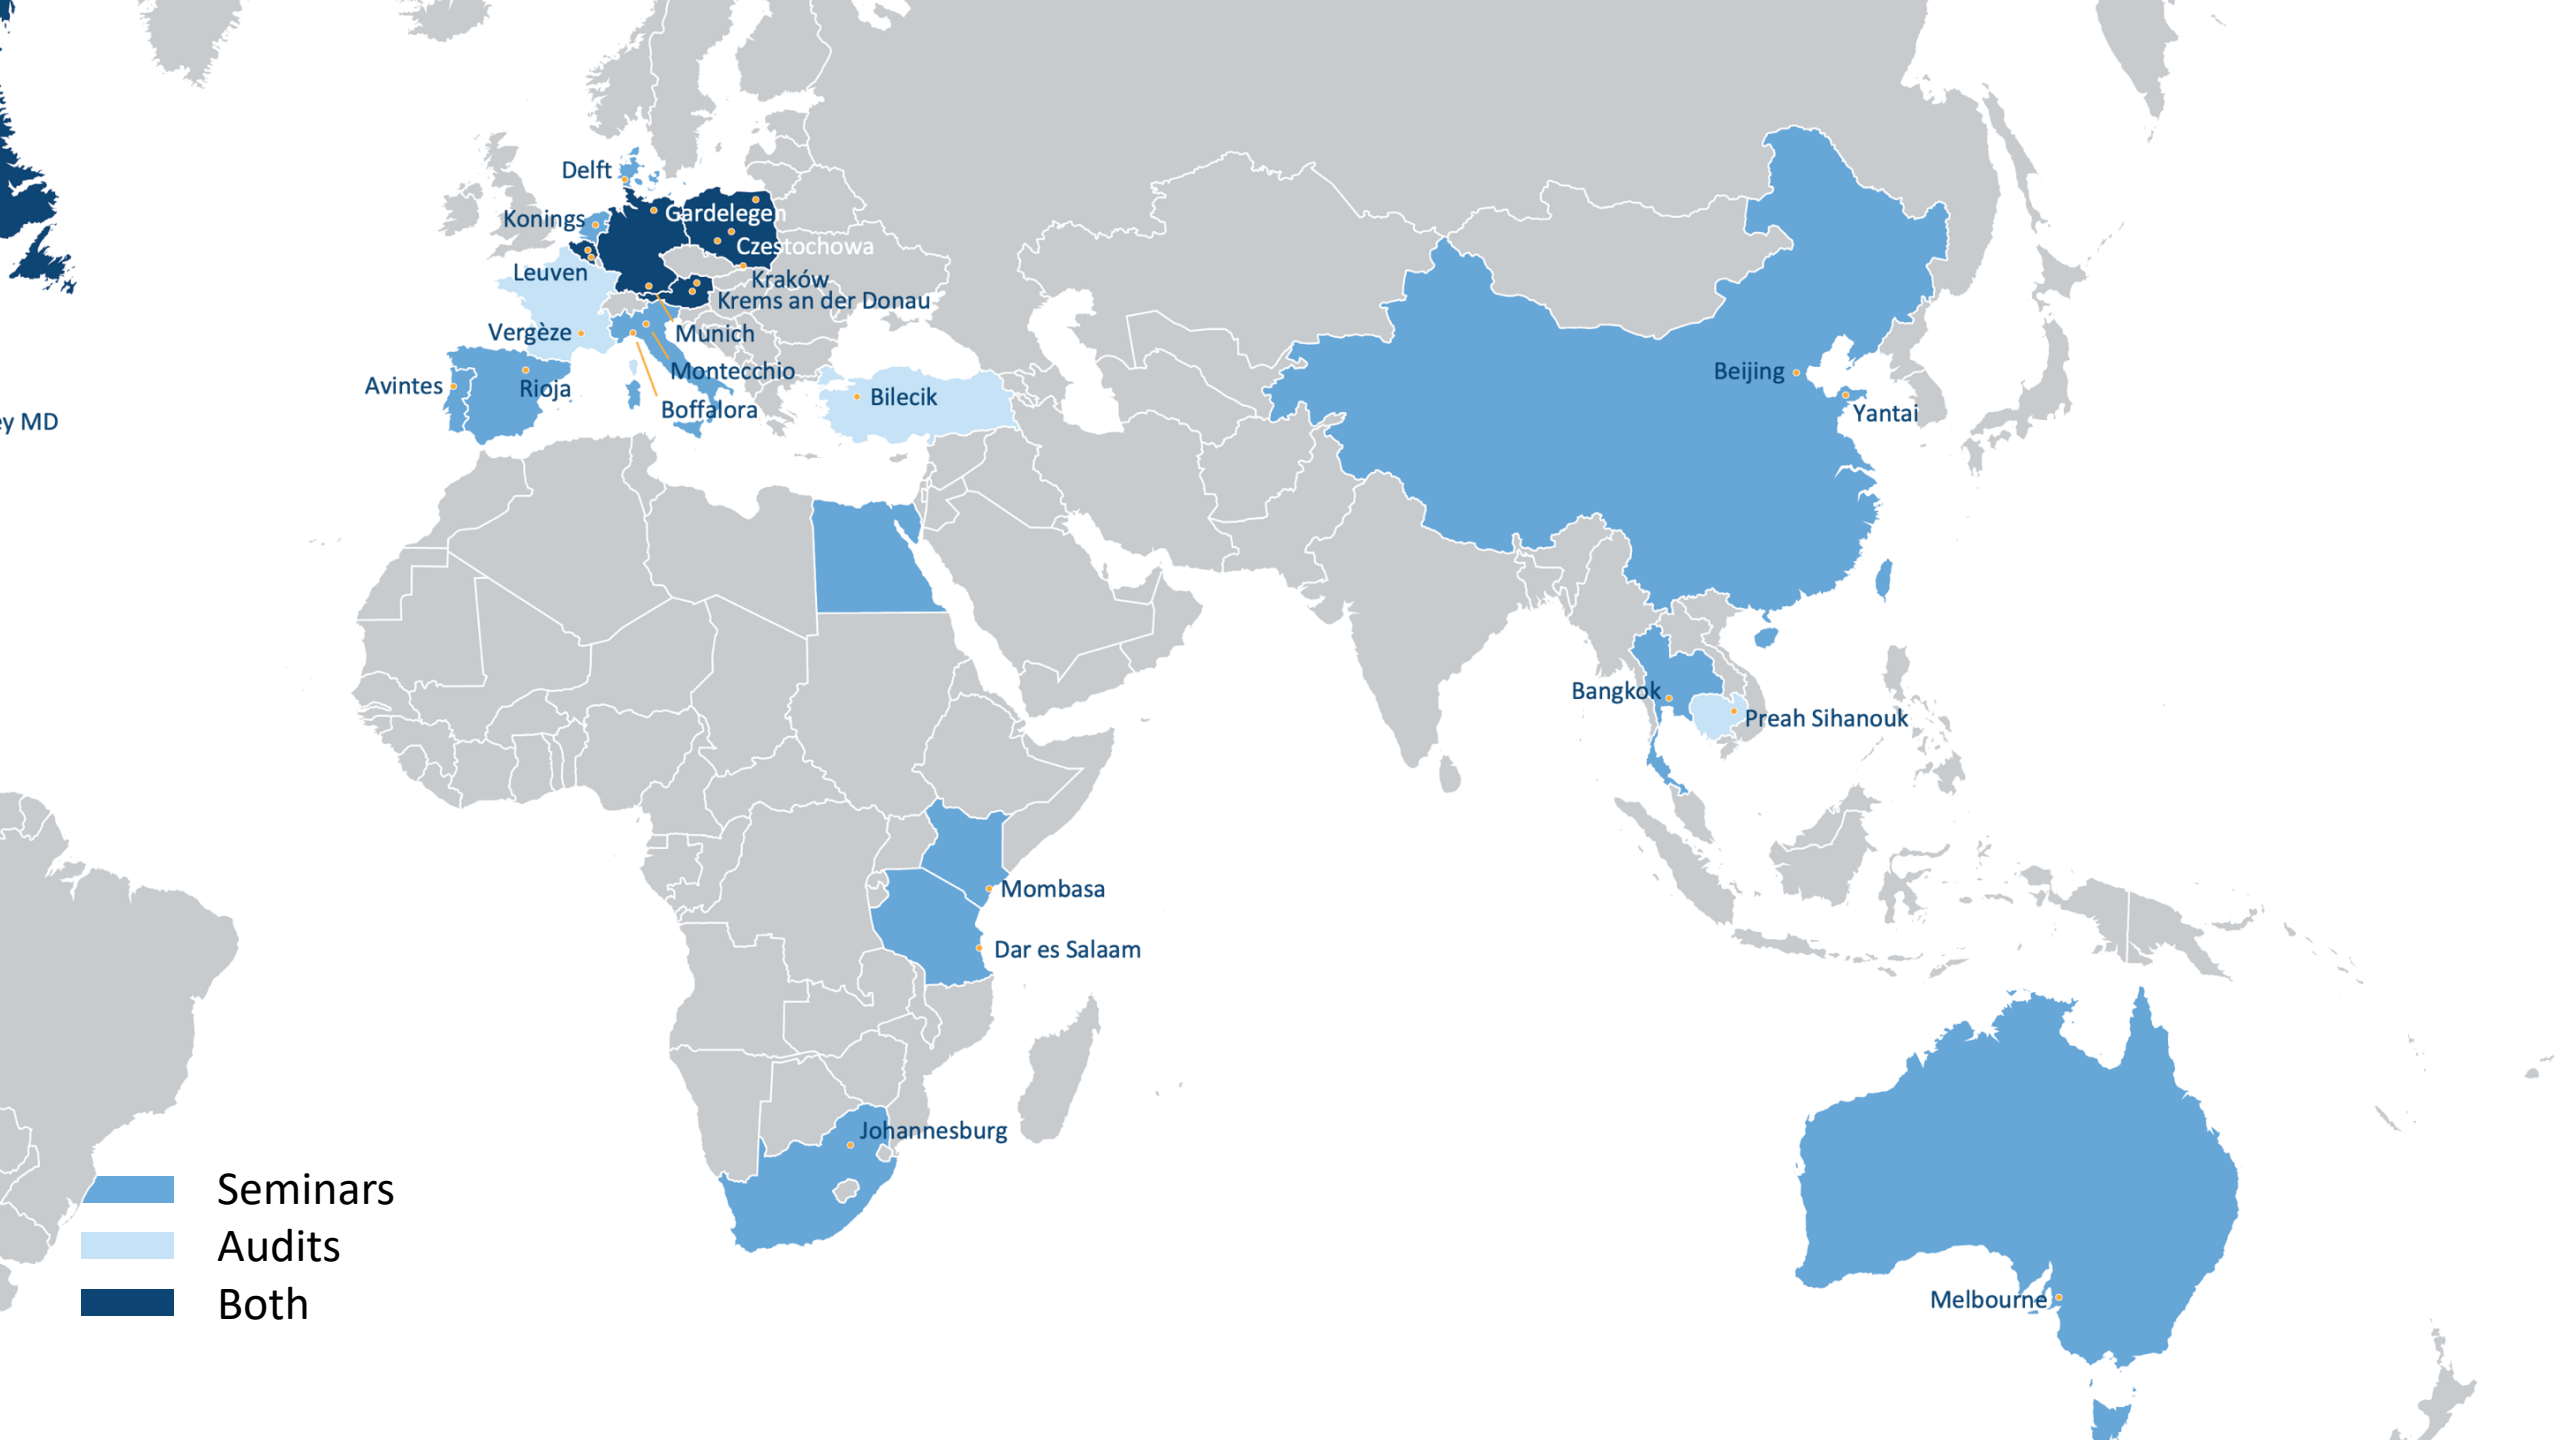

- Seminars
- Audits

-  Both

Product Sustainability - Recycling

For every ton of glass recycled, over a ton of natural resources are conserved, including 1300 pounds of sand, 410 pounds of soda ash, 380 pounds of limestone and 160 pounds of feldspar.²

Multistream recycling – separated from other recyclable materials - provides about a 90% rate of being made into new products.³

Issues such as stones arise if contaminants are mixed in with the cullet when it reaches the melting process. Uncontaminated cullet offers cost and energy savings.

Product Sustainability - Recycling

Partner with Agr for an effective program

- Composition analysis
- Coating Process review
- Container testing and measurement

Agr

Process Sustainability – Testing needs

Process Sustainability – Automation

What is automation?

Anything that reduces human intervention and makes operations efficient and easier!!

When is automation necessary?

- Increased volume or speed
- Required precision / intolerance to variation
- Increased efficiency
- Better quality

Automation is needed for high speed, repeated, consistent operations

Process Sustainability - Automation

How does it relate to glass bottle manufacturing?

- High volume / high speed demands to satisfy customer needs
- Tighter budgets – produce more output with less resources
- Lightweighting
- Efficient use of personnel
- Go green – sustainability goals

Pushes us into automation to increase efficiency...

Process Sustainability - Digitalization

How can digitalization help?

- Removal of manual work
- Reduce error
- Quick results
- Consistent measurements
- Quick and unbiased response options
- Traceability
- Prepare for Industry 4.0

Process Sustainability – Automation & Digitalization

Laboratory

- Quick and reliable results without manual entries
- Monitor and track production performance
- Validate design / production
- Traceable results for production runs

Process Sustainability – Automation & Digitalization

Sampling

- Perform specialized measurement and testing
- Automate test runs with no user intervention
- Receive immediate feedback to address any process drifts
- Increase profitability

Sustainability – complete solution

Sustainability – glass container manufacturing
