

Reducing Glassmaking Emissions: a gateway to the digital future of process control technology

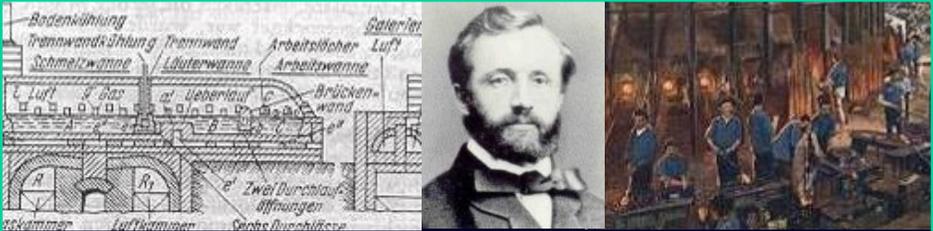

AI and Digitalization - the future for sustainable glassmaking (AIGMF, India)

Our purpose

We create **technology** to
transform the everyday,
for **everyone.**

Siemens footprint in the glass industry

We strive for customer proximity and reliable support

Friedrich Siemens invented and patented the regenerative furnace - beginning of the Industrial Revolution in the glass industry

1856

1862 – 1957

>30 years domain know-how

Establishment of a Siemens team for the glass industry with a focus on electrification and automation

1987

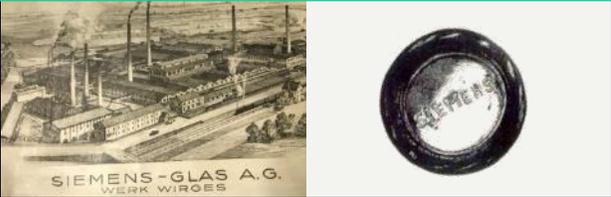

2010

Development of digitalization use cases for the glass industry based on the principles of Industrie 4.0

2015

since 2020

Siemens as hollow glass manufacturer with factories in Dresden, Wirges, and Berlin and a total of 7000 employees. During this period, Siemens was the leading European glass manufacturer

Plant-wide automation concept was well received in the market and has since then served as an example of a comprehensive approach in the glass industry

Environmental efficiency solutions based on our portfolio to save resources such as water, energy, reduce waste and lower CO₂ emissions

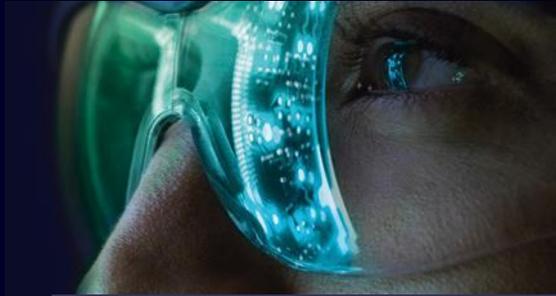

Various challenges in glass manufacturing

Digital enterprise

Are your plants and machines both flexible and highly available?

Security

Are all your security concepts up to date?

Energy transformation

How is your cost efficiency and your resource efficiency?

Sustainability

How close are you to achieving your sustainability goals?

» Digitalization

Looking at our giant monitor wall, you'll be amazed at how your glass production can be virtualized and improved in real terms across the entire value chain and throughout the lifecycle.

» Holistic Automation

We'll be happy to show you plant-wide, integrated automation solutions as well as the benefits of our comprehensive orchestration of all plant sections.

» Sustainability

In consultation with our colleagues, you'll learn how you can use smart software solutions to improve your energy efficiency while also reducing emissions.

» Convergence

See firsthand how we connect your worlds from the sensor to the cloud. Our many years of experience in IT/OT convergence can substantially boost your efficiency.

» Security

Protect what's important to you with our comprehensive approach. Let's talk about how we can also make your company secure on every level.

What is the market demanding? Operational challenges for Glass Industry

Increase energy efficiency

Energy data transparency
Production KPI indication and analysis

Reduce energy cost

- Energy peak management
- Optimize energy procurement
- Optimum use of waste heat/energy

Compliance and legal regulations

ISO 50001, legal requirements, tax refunds, carbon footprint certificates

Optimum use of renewable energy

Holistic concept for generation, storage and utilization/sourcing & supply

Reduce CO₂ footprint & fulfill sustainability targets

- Emission monitoring and control
- CO₂ recycling

Increase employee awareness

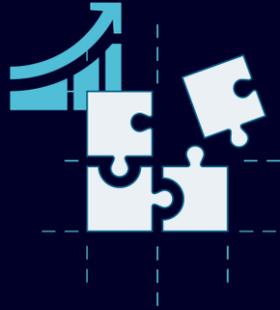

Active consideration of energy costs through the value chain, from plant floor to utility facilities

A clear view into the futures

How can Siemens assist you

Optimize production through
Digitalization

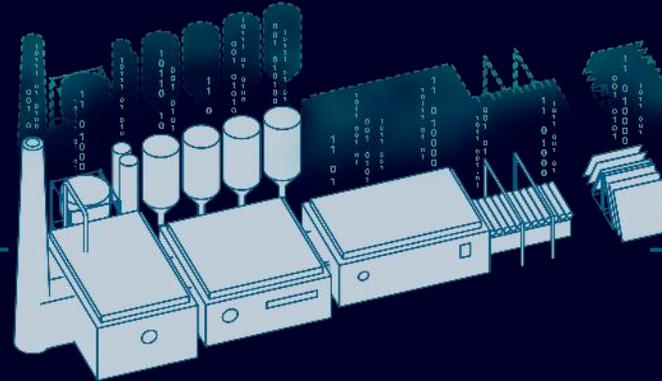

Integrate a holistic **digital twin**
to achieve closed-loop optimization

Enhance **cyber security** and drive
the convergence of OT and IT with the help of
cloud and edge computing

Innovation in products, production
and machines

An individual and customer-specific digitalization
roadmap with **digitalization
consultant**

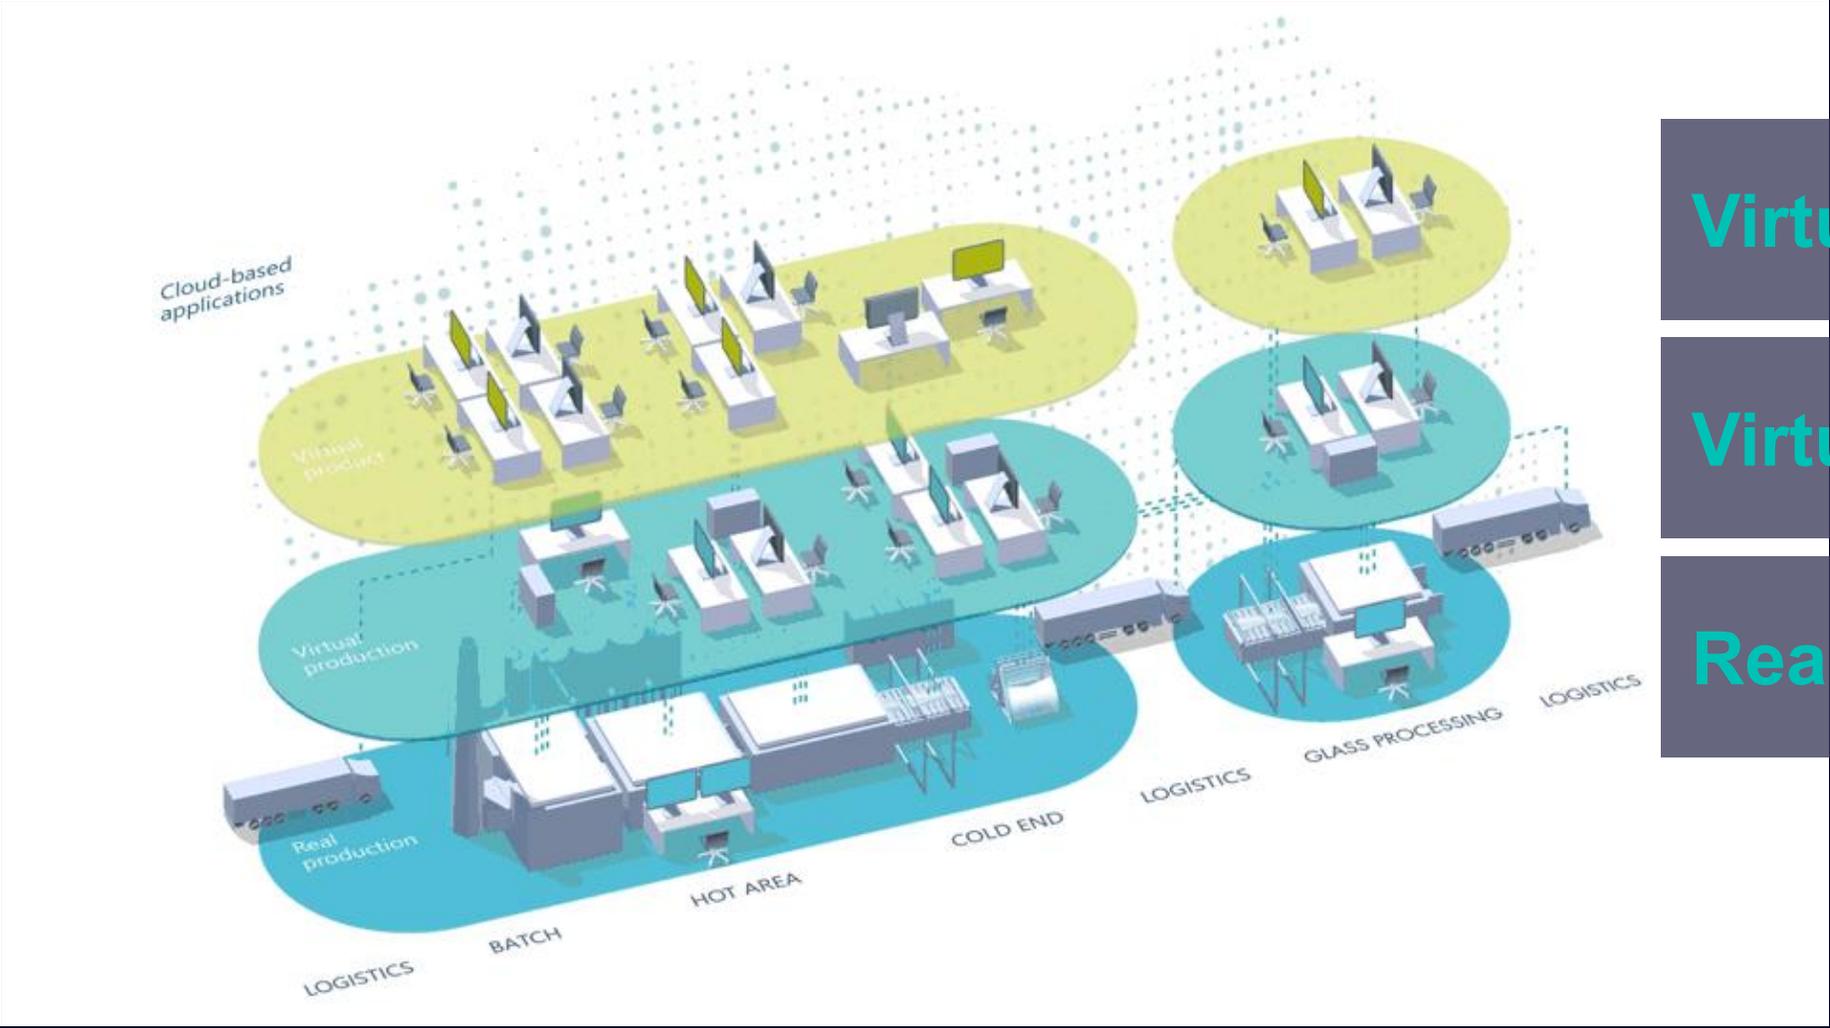

Flexibility with plant-wide
automation for individual production
needs and scale up

Various application and use-cases for
Energy Efficiency and
Decarbonization

Make best use of data and AI-
supported analytics improving
maintenance and operating
autonomous plants

End-to-end digitalization: Automation, software and services through the value chain for the digital enterprise in glass industry

Virtual Product

Virtual Production

Real Production

Innovative use-cases and concepts along the entire supply chain for the Glass industry

Value add

Digitalization

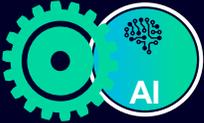

Digitalization as enabler to optimize production

Ecosystem

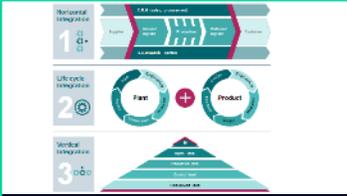

Together with our partners we support our customers' efforts becoming future-proof

Flexibility, Efficiency, Quality

Concepts and technology to achieve the next level of productivity

Use-cases and concepts in focus areas

Digitalization consulting

Production simulation

Digital twin for machines

IT/OT convergence

Software-defined Automation is the way the industry will evolve from classic automation pyramid to a user-oriented, flexible architecture

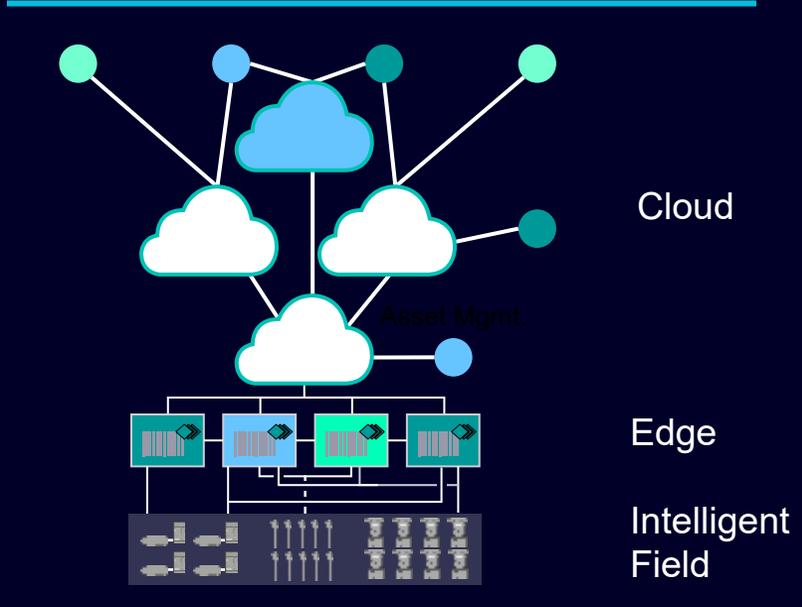

Yesterday

Today

Tomorrow *exemplary*

IT – OT convergence
with SIMATIC PCS neo

Software-defined Automation with SIMATIC PCS neo paves the way from classic automation pyramid to a user-oriented, flexible architecture

Built-in security

Security by design and defense in depth based on IEC 62443 and IT encryption

Object-oriented Data Management

Always up-to-date & consistent information

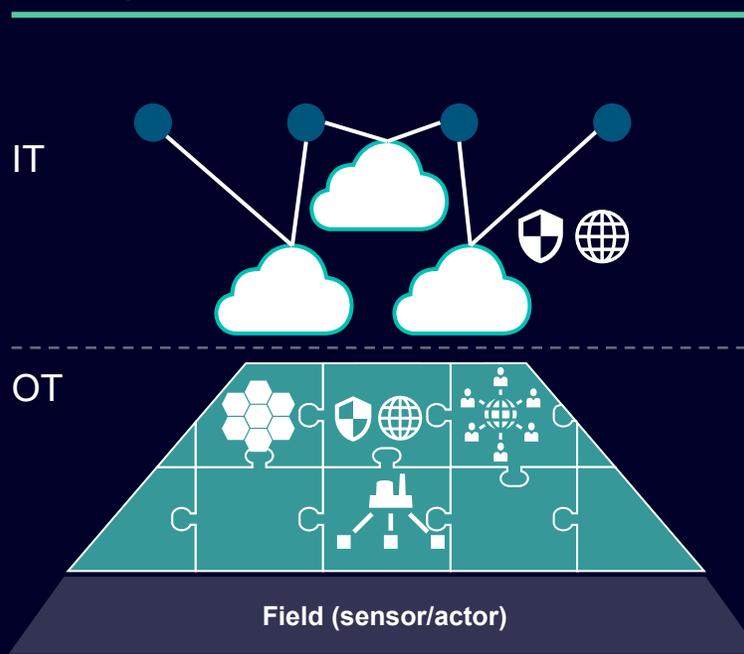

Flexibility and Openness with MTP*

Modularization for flexible plant design in SIMATIC PCS neo

* Module Type Package (MTP)

Today SIMATIC PCS neo

Scalability and Deployment

Flexible deployment, SaaS, efficient engineering and operation from smallest applications to world-scale plants

Collaboration

Multi-user engineering and operation for global collaboration on a highly efficient level just within a browser – anywhere, anytime and device independent

Glass Futures

A groundbreaking collaboration with Siemens

CUSTOMER PROFILE

Glass Futures is a global not-for-profit research and technology organization dedicated to advancing the glass industry. To lead the glass industry towards a sustainable future by bridging the gap between research and commercial viability. Glass Futures focuses on developing innovative technologies and processes that reduce carbon emissions and enhance the overall sustainability of glass production.

CHALLENGES

- Utilize state-of-the-art technologies
- Share new technologies, tools, and training opportunities
- Expertise in digitalization, automation, drives and security

SOLUTION

- Founding member and technology partner:
 - Consulting expertise and network support
 - Technologies for digitalization, automation, drives, communication, security and power distribution
- Technological contributions:
 - Plant-wide automation for integrated sub-plants and systems
 - SIMATIC PCS neo process control system
 - SCALANCE network components
 - SIWAREX and SITRANS weighing and level devices
 - SINAMICS variable frequency drives
 - Continuous Emission Monitoring system

BENEFITS

- Sustainability: Supports global sustainability goals and carbon neutrality for glass manufactures, suppliers and end user
- Efficiency: Increased energy efficiency and optimized processes based on integrated systems and data for planning and services
- Collaboration: Open platform for industry-wide collaboration and innovation

“The collaboration of Siemens has allowed us to see a route through doing things differently and actually taking the leap.”

Aston Fuller,
General Manager, Glass Futures

How to adopt industrial AI solutions in the glass industry improving the Energy efficiency

Process Optimization
 (real and digital worlds)
 to empower glass manufacturer
 to improve their operations
 and drive innovation

A digital and IoT enabled
 portfolio with offerings from
Siemens and partners

Our **AI framework**
provides hardware,
software, and services
 enabling to create, operate
 and scale AI solutions

AI Energy Optimizer

AI Energy Optimizer
 Improve efficiency with power of data

Advance Process Control

Industrial Edge

Introducing
Industrial Edge

An open platform to integrate IT mechanisms into the shopfloor in a way software- & data handling becomes scalable, reliable and easy to use.

Senseye

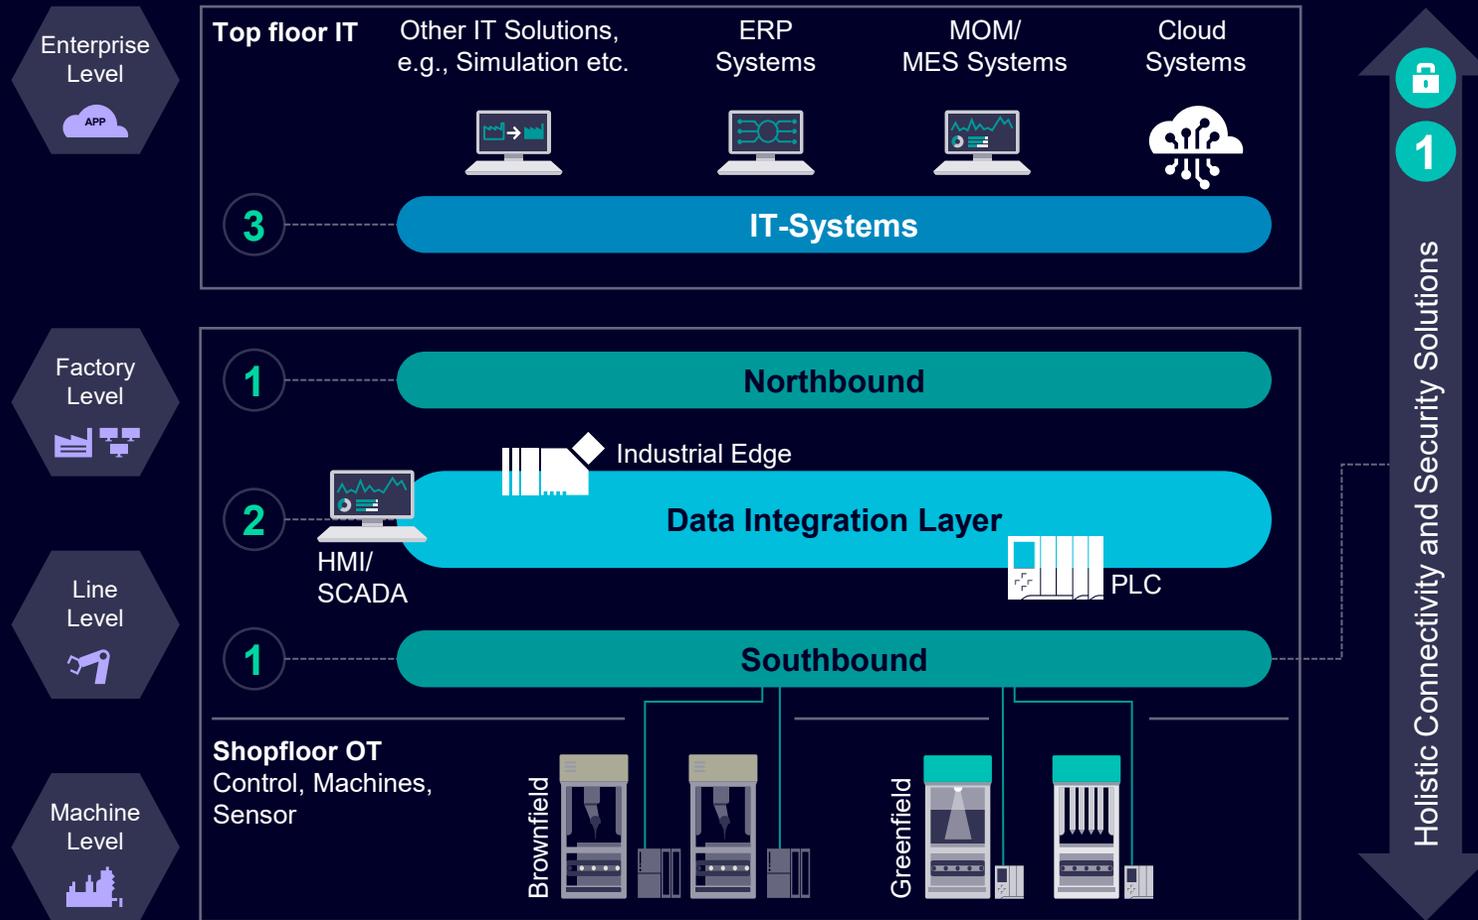

Predictive Maintenance

AI framework

- Standardized infrastructure is essential**
 Siemens industrial AI framework provides reliable & secure infrastructure, ensuring serviceability and process compliance
- Easy to deploy, run and monitor**
 Our applications allow automation engineers with no AI background to easily deploy, run, and monitor your AI solutions
- Reliability and security standards**
 With our Industrial Edge platform, we ensure reliable & secure AI to the shopfloor

Siemens delivers holistic solutions integrating relevant data to scalable use cases

Back to solution →
overview

Think Big, start smart

- +** **Integrated Solutions,**
e.g., Order Execution, Tracking and Tracing
- 1** Integrated of existing equipment for a uniform data model and protect the factory from cyberattacks
 - Industrial edge
- 2** Manage standardized data to enable scalable digital workflows to increase productivity
 - Industrial edge
 - Mendix low-code platform
 - Scada System, DCS / PLC
- 3** Increase transparency for better manage processes and optimize the production
 - Opcenter Advanced Process Scheduling
 - Mendix low-code platform
 - Flow simulation

Exemplary Architecture with connectivity options and technical possibilities

Building optimization with Desigo

SIMATIC Energy Manager

SiGREEN Product Carbon Footprint management tool

Green Consulting

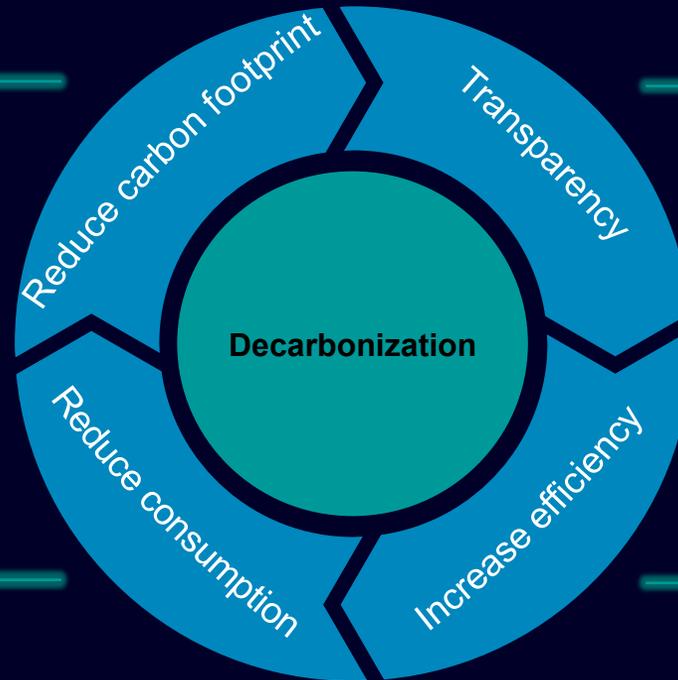

Decarbonization Roadmap

AI based energy optimizer system

Furnace simulation and Model predictive control

Increase OEE with Industrial Edge

Our industrial Energy- and Carbon Emission Management portfolio

Energy Manager
for Insights Hub

Management level

Energy Manager
for Industrial Edge

Processing and monitoring with
PCS 7, PCS neo and WinCC

Production level

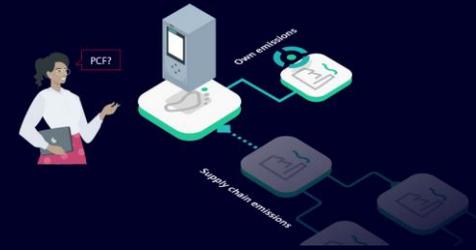

Acquisition

Field level, e.g. instrumentation, drive motor, 3rd party metering, ...

SiGREEN

Product Carbon Footprint

SIMATIC Energy Management

Plant and company-wide energy management

SIMATIC PCS 7, PCS Neo

Efficiency in production

- Process monitoring and control
- Automatically generated instead of programmed
- Real-time measurement directly in the field

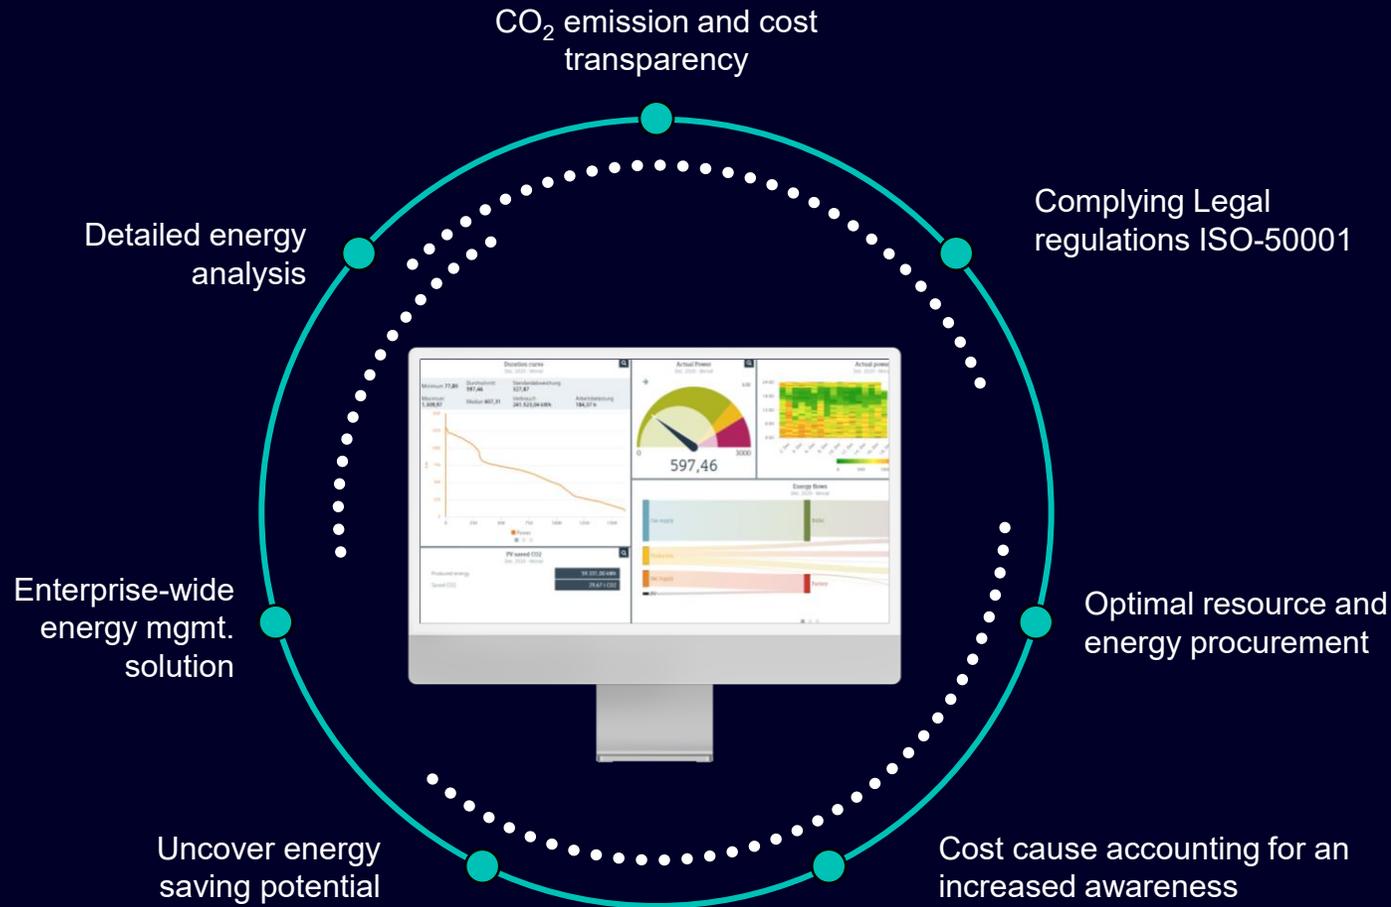

Integrated energy measurements

Directly in the field: For example with
SITRANS metering devices

SIMATIC Energy Meter (ET 200SP)

SENTRON PACs, ...

Obtain the greatest value from transparency with our Energy Manager

Legal regulations

Carbon Footprint

Optimized use of resources

Situation

- Insufficient data and analytics
- Inability to conduct detailed energy analysis

Requirements

- Enterprise-wide energy management solution
- Complying legal regulations ISO-50001

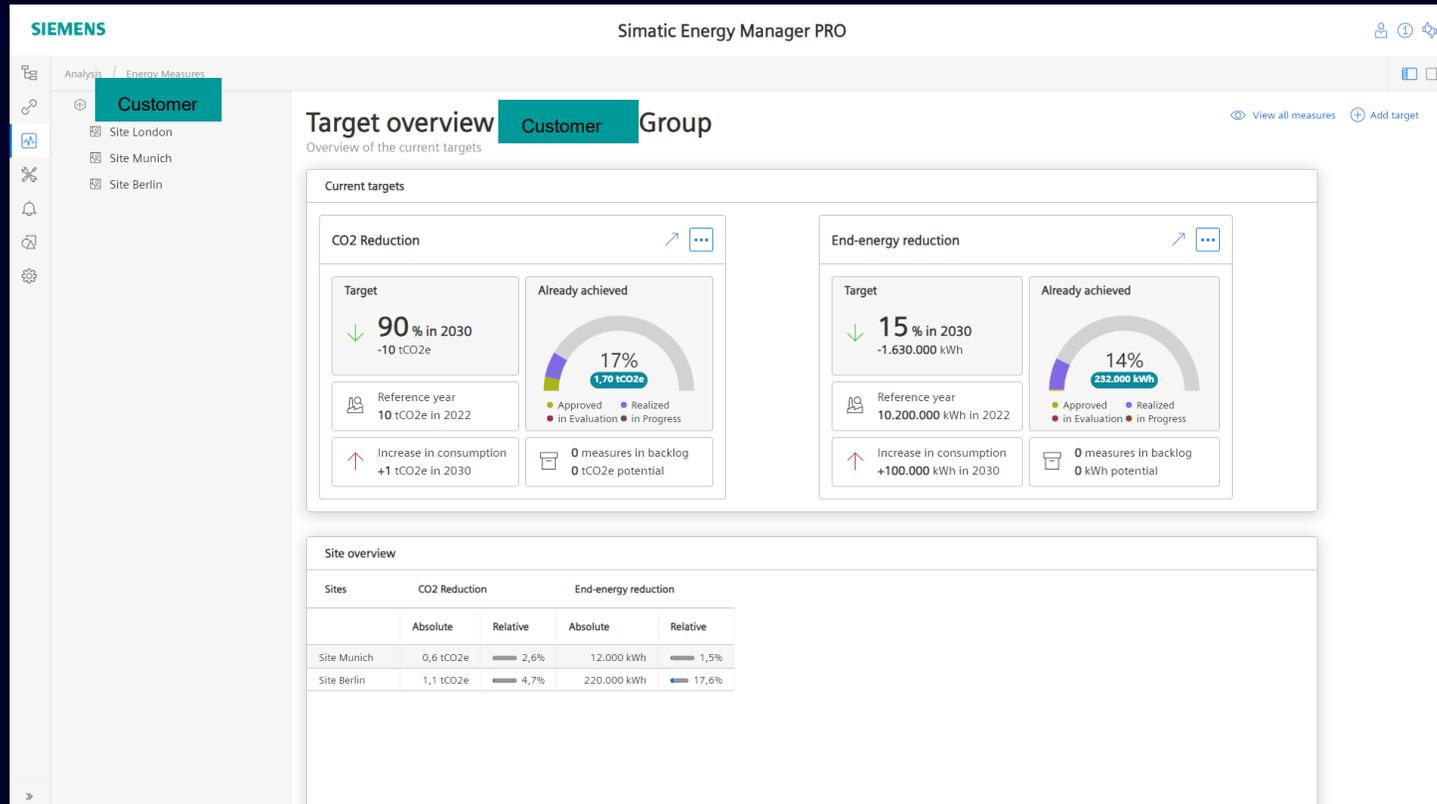

Benefits

- Providing a holistic view about the energy and resource consumption
- Comprehensive analysis functions to investigate and improve of energy efficiency
- Transparency of energy costs and CO₂ emission from different plants worldwide

Further information: Energy Manager (www.siemens.com/energymanager)

SIMATIC Energy Manager Target Cockpit

Target achievement

- The Target Cockpit provides an overview about defined targets and the target achievement with detailed information
- User can see the base year, the consumption and the expected increase of energy consumption without considering measures
- User get an overview about the target achievement of each individual Site
- The user can define further site-specific targets.

Reducing carbon emissions and energy use in glass manufacturing

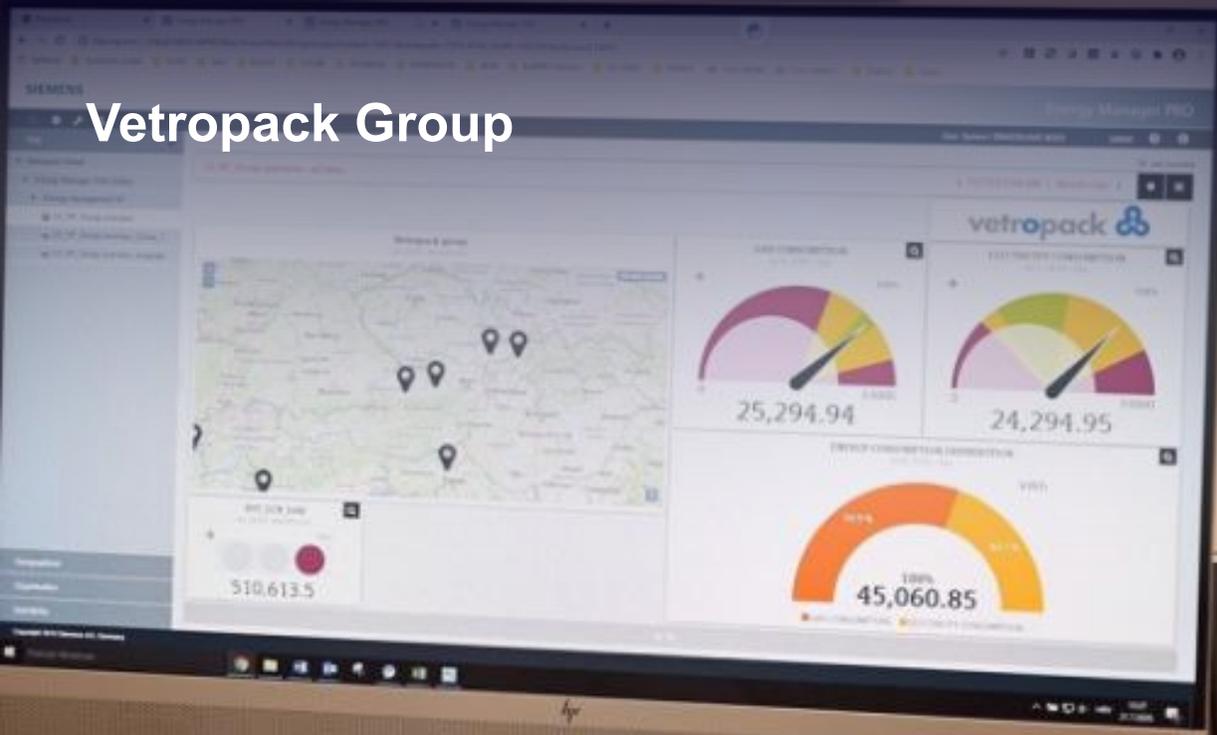

↓ 50% Potential reduction in municipal water use

↓ 20% Potential reduction in natural gas use

STOELZE GLASS GROUP
Partner with Siemens to implement an energy management system providing full transparency of energy use, define CO2 KPIs and exchange emission data along the value chain to obtain a product's true carbon footprint

Vetropack Group

“Sustainability ensures our business success”

Customer profile

International container glass manufacturer HQ in Switzerland, with several production plants in Europe, serves food & beverage industry

Challenges

- Standardization of the energy measuring points and KPIs
- Planning and strategic procurement to invoice verification
- Define the standards for local factories, harmonize group company-wide energy efficiency activities

Solution

- Implement the EDMS Simatic Energy Manager Pro in 8 factories in Europe
- Consultancy, commissioning, training, services, customization in individual plant
- Realize energy purchasing application
- complete transparency across all relevant energy and media consumption including CO2

➤ Comprehensive approach to link operating and energy data

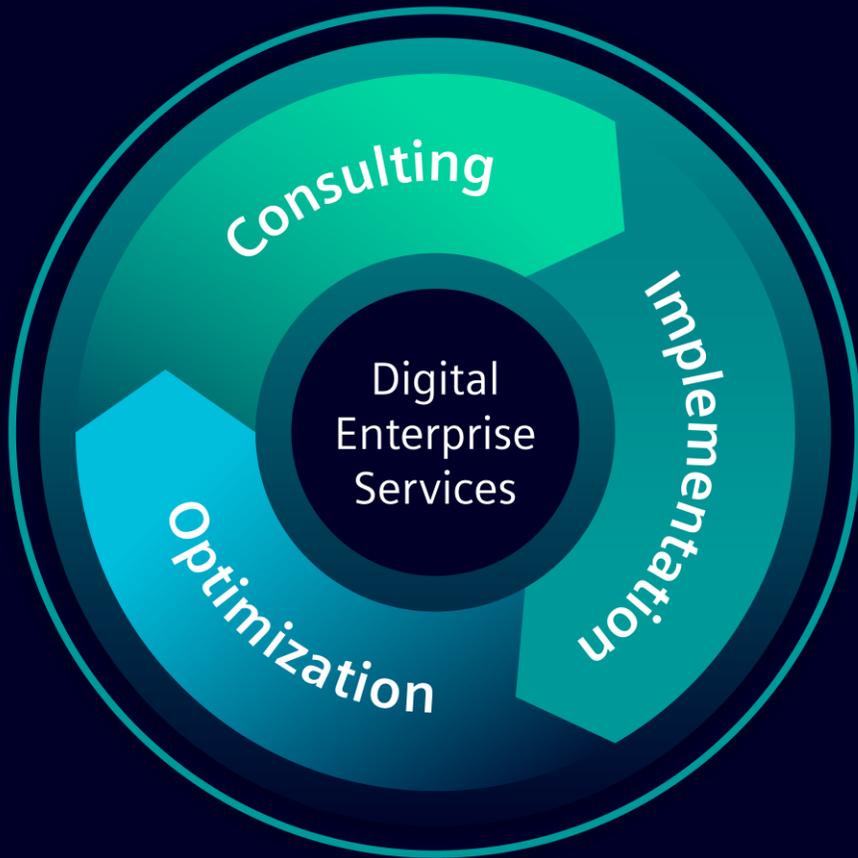

“What you do not measure, you can’t manage.”

Head of corporate procurement - Vetropack

How to start?

Our Services for industrial Energy and Carbon Management Systems

01 | Consulting

Concept-Workshop

- Definition of Energy Performance Indicators (EnPIs and KPIs e.g. CCF, PCF)
 - Creation of a measurement concept
 - Assessment of data collection and connectivity requirements
-

02 | Implementation

- Installation of required hard- and software
 - Data modelling and pre-processing of input data
 - Creation of dashboard and reports
 - Basic and expert trainings for user and administrators
-

03 | After sales support and service

- Analysis of the energy performance
- Tailor-made recommendations for action and optimization potentials
- Hard- and software maintenance services (SUS)

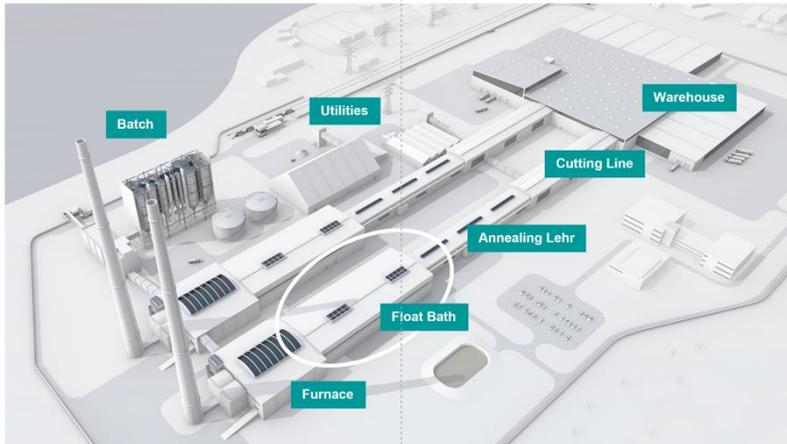

AI Energy Optimizer

Energy optimization through artificial intelligence enhanced analytics

Initial situation

Enabled by Siemens offerings

The complexity of industrial process applications

Challenges

- complexity of industrial process applications
- Float glass industry need tools that enhance process and production transparency to identify potential and starting points for optimizing process parameters

Value Proposition

- Machine Learning model
- collects data from Energy Pro or any other data source
- results are then visually shown
- Siemens cloud-based operating system

Energy optimization for the glass industry

 <p>Rule-based alerts AI Energy Optimizer reads pre-defined tags in real-time and runs the machine learning algorithm to assign anomaly scores which, if exceed certain thresholds, trigger alarms for operators.</p>	 <p>Prediction Energy Prepare standard adapters for data collection (remove dependence on Energy Manager) and platform agnostic (on-premise, cloud-based).</p>
 <p>Energy saving and Carbon reduction Proper operation and the optimization of tin bath electric roof heating results in energy saving opportunities for the glass industry.</p>	 <p>Cost saving Provides early alarms of improper operation allowing users to take rectification actions to mitigate material and other losses in contrast to the late detection of anomalies.</p>
 <p>Intuitive interface Intuitive user interface enables users to use the tool without extensive training.</p>	 <p>Open, cloud-based IoT operating system AI Energy Optimizer is part of our Asset and Process Performance Suite for industrial applications and advanced analytics.</p>

Advantages

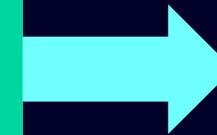

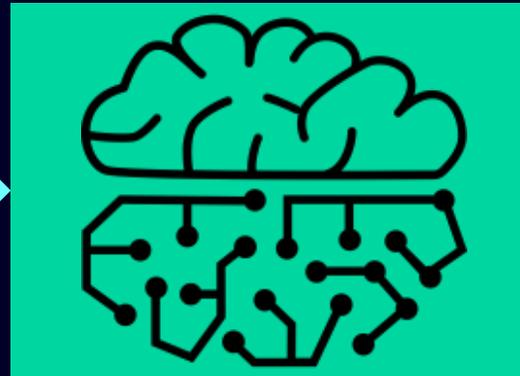

- recognizes complicated consumption patterns
- maintains assets at their optimum performance levels
- identifies energy-saving opportunities
- assists energy consumption planning
- enables data transparency
- offers alarm capabilities

AI Energy Optimizer, Improve efficiency with power of data
Our solution uses AI/ ML to predict the ,good' power consumption

- 1. Glass pull
- 2. Lehr speed
- 3. Glass width
- 4. Tin bath outlet temperature
- 5. Tin bath inlet temperature
- 6. Tin bath center temperature
- 7. Glass thickness
- 8. Glass quality
- ...

ML/ AI Model

Tin bath roof electric heating

The deviation between measured power vs. predicted power defines the opportunity of energy saving

AI Energy Optimizer From Engineering to Deployment...

[Back to solution overview](#) →

Data collection, cleansing, labeling

AI model inputs (tags) identification

AI model training, validation & testing

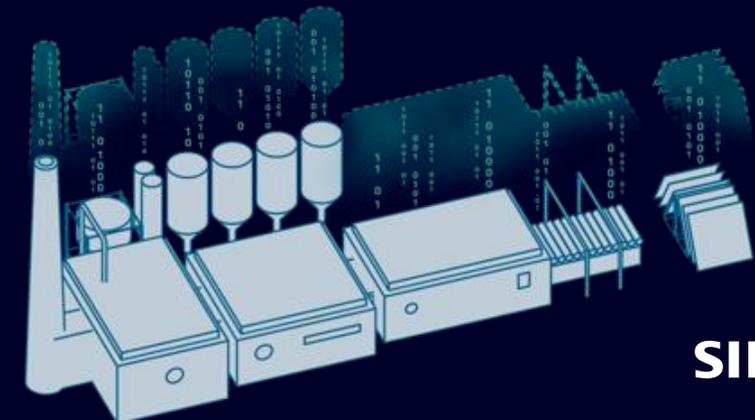

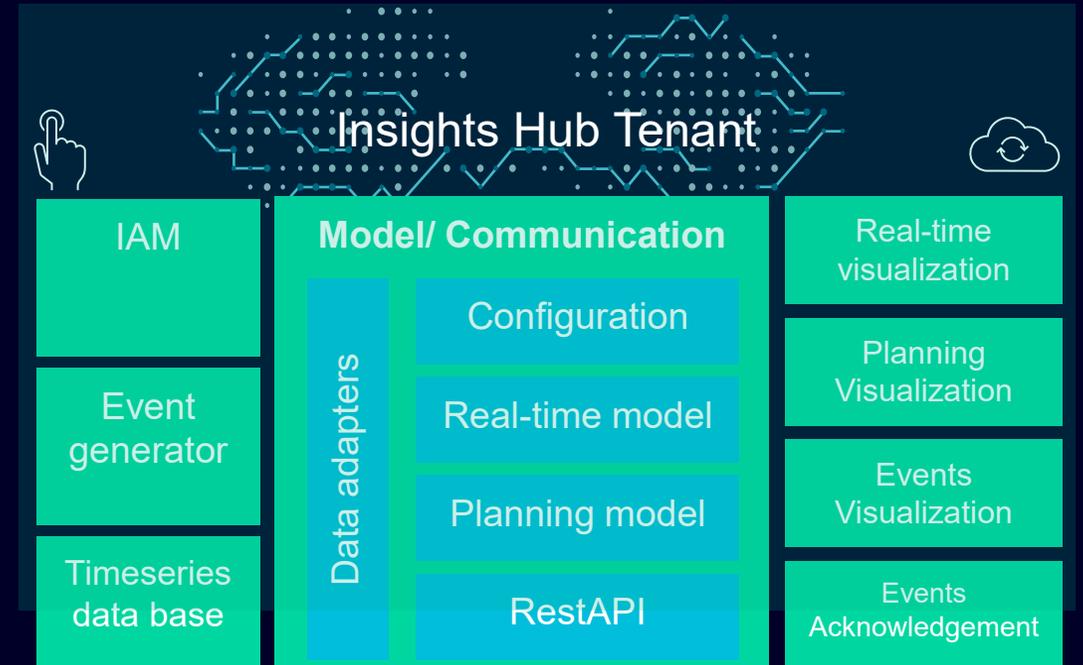

Setting the inputs ids' (tags) needed for real time operation

Setting graphs alias names

Deployment

AI Energy Optimizer: Energy saving opportunities for the customer

Summary:

Green and clean energy use

Increase energy efficiency

Process optimization

Equipment and facility efficiency

End-to-end digital transformation

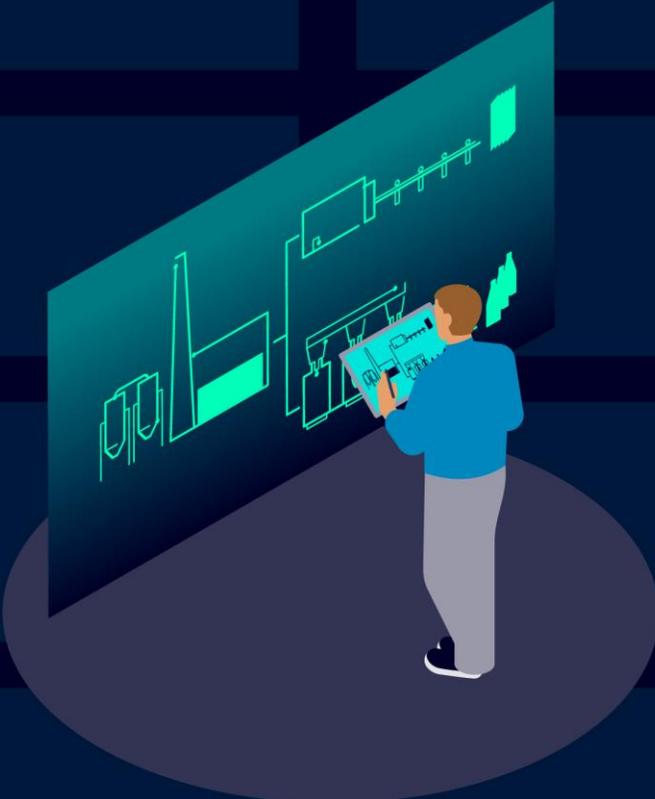

Waste heat recovery

Carbon capture, utilization, and storage (CCUS)
